

Syllabus

PREWORK – 2 weeks – 20 hrs

Prior to the start of the Bootcamp, learners are required to complete the self-paced Prework module, whose objective is to bring everyone to the same level of technical expertise. This module will familiarize learners with the platform and acknowledge key details of the Bootcamp. The Prework can take anywhere from 10-40 hours depending on the learner's technical background.

Topics Covered:

- Basics of Computer and Device Hardware, Software, Operating Systems and Processes in Windows and Linux
- Networking Basics and the OSI Model

TOOLS: *Wireshark, Putty*

I. BOOTCAMP INTRODUCTION – 40 hrs

The Bootcamp Introduction provides learners with the tools required to make the Bootcamp an enjoyable and efficient learning experience. During this module, they will learn how the Bootcamp will be structured as well as the basics of computers.

Topics Covered:

- Overview of Bootcamp and Cybersecurity Industry
- Cybersecurity Career Paths
- Prework Content Review

II. NETWORK ADMINISTRATION – 40hrs

In the Prework module, bootcampers are taught the fundamental principles and concepts of networking. This module dives even deeper and focus on designing, configuring, and troubleshooting networks. Bootcampers will learn the necessary skills for running and monitoring a network in an insightful manner.

Topics Covered:

- Network Configuration – LAN, WAN
- Segmentations, VLANs and Subnetting
- Network Mapping Tools
- Troubleshooting and Monitoring Networks
- Network Devices – Switches, Routers
- Telecommunication
- System Administration

TOOLS: *Cisco Packet Tracer, Nmap, Windows PowerShell*

III. INTRODUCTION TO CYBERSECURITY 40hrs

This module is designed to teach how organizations implement cybersecurity and introduce the different roles in the industry. Additionally, bootcampers will get to know the history of famous hackers from the 1950s until today. This module will then explore modern hackers and their motives, capabilities, and techniques, as well as the different types of malware they use to attack their victims.

Topics Covered:

- NIST Framework
- Malware Types
- Social Engineering
- Vulnerabilities, Risks, and Exploits
- Famous Cyber-Attacks

IV. NETWORK AND APPLICATION SECURITY – 40hrs

In this module, bootcampers learn about network and application security defense methodologies. They will be able to identify which tools are required based on the network and the needs of the organization. It also covers construction of secure network architectures. For each method, bootcampers will learn how to detect and eventually block malicious actors from carrying out cyber-attacks and crimes.

Topics Covered:

- Cryptography – Symmetric vs Asymmetric Keys
- Encryption/Decryption, Hash functions
- Security Architecture
- Security Tools – Firewalls, Antivirus, IDS/IPS, SIEM
- Access Control Methods, Multi-factor Authentication, Authentication Protocols
- Honeypots and Cyber Traps

TOOLS: *Kali Linux, Splunk, Snort IDS, Active Directory, Nmap, Windows Firewall, Linux iptables*

V. INCIDENT HANDLING – 40hrs

In this module, bootcampers learn about the most common types of cybersecurity attacks. They will practice detection and analysis of incidents as a Cybersecurity Analyst would in real life. They will also analyze different attack vectors and their attributes and identify false-positive cases.

Topics Covered:

- Detection and Analysis of Cyber-Attacks – DDos/Dos, Brute-Force
- OSWAP Top 10 Attacks – SQL Injection, Cross-Site Scripting
- Group and Individual Incident Report Writing

TOOLS: *Splunk*

VI. FORENSICS – 40hrs

In this module, bootcampers will learn digital forensic processes for analyzing threats in digital devices. This includes identification, recovery, investigation, and validation of digital evidence in computers and other media devices.

Topics Covered:

- Computer Memory Forensics, Memory Dump Analysis
- FTK Imager, Autopsy, Redline and RAM capturing
- Digital Evidence Acquisition Methodologies
- Registry Forensics
- Windows Timeline Analysis and Data Recovery
- Network Forensics, Anti-Forensics and Steganography

TOOLS: *Volatility Framework, FTK Imager, Autopsy, NetworkMiner, Wireshark, OpenStego, ShellBags Explorer, winmd5free, Magent RAM Capture, Redline, HxD*

VII. MALWARE ANALYSIS – 40hrs

Bootcampers will learn different techniques for analyzing malicious software and understanding its behavior. This will be achieved using several malware analysis methods such as reverse engineering, binary analysis, and obfuscation detection, as well as by analyzing real-life malware samples.

Topics Covered:

- Dynamic Malware Analysis, Reverse Engineering and Malware Obfuscation
- Fileless Malware Analysis
- Containment, Eradication and Recovery Malware Stages
- Android APK Analysis

TOOLS: *HashCalc, Exeinfo PE, PDF Stream Dumper, FileAlyzer, HxD, Yaazhini Vulnerability Scanner, APK Tool, Ghidra, HashCompare, UPX Easy GUI, Wireshark*

VIII. ETHICAL HACKING AND INCIDENT RESPONSE – 40hrs

As future Cybersecurity Analysts, it is essential for bootcampers to understand offensive methodologies in cyber warfare. In Ethical Hacking, they will learn how to perform cyber-attacks, which will provide them with insights on cyber defense best practices, vulnerability assessments, forensics, and incident response processes. In Incident Response, bootcampers will learn the relevant response methodologies used once an attack has occurred. They will overview identifying cybersecurity breaches, insider/outside threats, incident response life cycles, performing relevant assessments, and developing protection plans.

Topics Covered:

- Ethical Hacking Processes and Methodologies
- Network Hacking, Reconnaissance, Google Hacking and Locating Attack Vectors
- Exploitation Techniques
- Web Application Hacking, OWASP Top 10 – XSS, SQL Injection, Manual and Automated Attacks
- Post Incident Activity

TOOLS: *Metasploit, SQLMap, Nmap*

IX. SECURE DESIGN PRINCIPLES – 40hrs

In this module, bootcampers will learn about trend analysis and how to perform it. They will become familiar with the newest cybersecurity trends, threats and more. Furthermore, bootcampers will learn cybersecurity design best practices, as well as how to assess and detect security design flaws.

Topics Covered:

- Trend Analysis
- Artificial Intelligence in Cybersecurity
- Zero-Trust Policy
- Best Detection Methodologies
- Incident Impact Mitigation

X. RISK MANAGEMENT – 40 hrs

In this module, bootcampers will learn about risk management, and dive into the cybersecurity aspects involved. In today's world, almost any action can become a potential risk. Therefore, bootcampers will learn risk management methodologies and processes that will assist in effectively managing such risks – while understanding that not all risks can be eliminated immediately.

Topics Covered:

- Risk Management Processes
- Analyzing, Prioritizing, Evaluating and Monitoring Severity of Internal and External Risks
- Risk Management Policies, Procedures, Standards, and Guidelines
- Security models

XI. THREAT INTELLIGENCE – 40 hrs

One of the ways to protect your organization is to know your enemy. In this module, bootcampers will learn different methods, processes, techniques, and tools involved in gathering intelligence about potential threats such as hackers and attack vectors.

Topics Covered:

- Threat Intelligence Cycle Methodology and Industry Implementation
- Google Hacking – Operators, Finding Sensitive Data, Directory Listing, Devices and Hardware
- Dark Web and Dark Market Investigation
- Online Anonymity using Metadata, Google Cache, VPN and Tor
- Trend Analysis, Basic Excel Data Analysis
- Industrial Tool Practice in Real Environments

TOOLS: *Elasticsearch, Kibana, Webhose data (logs from the darkweb), Web Scraping, Tor Browser, IntSights Threat Intelligence Platform*

XII. FINAL SCENARIOS AND INTERVIEW PREP – 40 hrs

The final module includes real-life scenarios of cybersecurity incidents, and a final exam covering all the content learned along the Bootcamp. In the Full-Time Bootcamp, learners will present group projects which were worked on throughout the course. We will also review technical and soft-skill preparation for job interviews.
