Sky Bridge Energy Project – B27-1026-03

Addendum #1

November 6, 2026,

Subject: Addendum #1 to RFB B27-1026-03 – Sky Bridge Energy Project

Reason for Addendum: This is a response to questions or clarification requests that have been received. The questions received with associated answers are provided.

Q1: If more detailed drawings are available for either sky bridge (pane layouts, pane sizes, interior height, or total glazing square footage), please provide them. If they are not available, that is fine.

A1: We do not have any additional drawings.

Q2: 3M Prestige and 3M Low-E are separate product lines, not one combined film. Please confirm which film you are requesting, including the exact product name and product number. We would expect Low-E is preferred given the colder climate, but please confirm.

A2: We are looking for a Low-E product. We need it to be reflective and opaque. The bidder should provide a product for approval.

Q3: What visible-light-transmission (transparency) level should bidders use for pricing, or should we include an allowance pending JALC's sample selection?

A3: No light transmission. Only reflective.

Q4: Please identify the existing glass type and construction so bidders can confirm film compatibility.

A4: We cannot verify. Contractors should field verify.

Q5: We would like to schedule a site visit to obtain detailed measurements before the bidding deadline. Please confirm how to arrange that visit.

A5: Please coordinate campus visits with Shannon Newman. Keep in mind the deadline to submit questions is 11/10/26 at 12:00pm (noon).

Q6: May we bring a Sunbelt Rentals representative on that site visit (or a separate visit) to evaluate boom-lift access to both sky bridges?

A6: Yes

End of Addendum #1
